CDE Curation Tool

The caDSR Common Data Element (CDE) Curation Tool allows content administrators to create, edit, and manage the metadata within the caDSR metadata registry. Items in the registry are referred to as either administered components or administered items and include data elements, data element concepts, and value domains, among other items. The current release number of the Curation Tool is indicated in the banner located at the bottom of the window.

The *CDE Curation Tool 4.1.2 User Guide* contains the following chapters:

Contents

- 1 - Navigating the Curation Tool
- 2 - Searching for Administered Items
- 3 - Working with Curation Tool Search Results
